```
nidhi@DESKTOP-ES2V6QC:~/hadoop$ hdfs dfs -cat /input/input11.txt
Hadoop is an open-source software framework for storing data and running applications on clusters of commodity hardware.

It provides massive storage for any kind of data, enormous processing power and the ability to handle virtually limitles
s concurrent tasks or jobs.
MapReduce is a programming model and an associated implementation for processing and generating large data sets.
Users specify a map function that processes a key/value pair to generate a set of intermediate key/value pairs,
and a reduce function that merges all intermediate values associated with the same intermediate key.
Hadoop MapReduce is the heart of Apache Hadoop.
nidhi@DESKTOP-ES2V6QC:~/hadoop$
```

Activate Windows
Go to Settings to activate Windo

```
nidhi@DESKTOP-ES2V6QC:~$ hdfs dfs -put ~/input11.txt /input
nidhi@DESKTOP-ES2V6QC:~$ hadoop fs -ls /
